Flexible Work Model - Remote & Hybrid

SUMMARY

- **Architecting robust full-stack software solutions** across diverse Pharmaceuticals, FMCG, and Oil & Gas sectors.
- **Expert in implementing industrial track-and-trace systems** and automation software for high-speed enterprise production environments for global brands like Coca-Cola and Heineken.
- **Programming PLCs and IoT devices** to seamlessly integrate industrial hardware with cloud/ on- premise systems for advanced production data analysis.
- **Daily Stack:** C# | ASP.NET Core | React | Vite | Python | Node.js | RESTful APIs | TypeScript | CSS | HTML5 | Microsoft SQL | PowerShell | Siemens / Festo PLC.

EXPERIENCE

Full Stack Software Engineer 06/2024 - Present

Mitas Corporation ↗

- Developed full-stack C#/.NET and React/TypeScript solutions to power automated inspection, labelling, and serialization/track-and-trace operations in high-throughput manufacturing environments.
- Designed relational database schemas in SQL Server to aggregate shift metrics, delivering live analytics dashboards for camera status, pass/fail rates, and production summaries during operational runs.
- Programming PLCs and IoT devices to seamlessly integrate industrial hardware with cloud/ on- premise systems for advanced production data analysis.
- Used those production reports to diagnose line issues, because I own the data model and the machine side.
- Experienced in leveraging AI-assisted development workflows with rigorous manual code review guidelines. LLM Ops & Observability

Software Engineer 09/2023 - 05/2024

Mitas Corporation ↗

- Built full stack features in C# / .NET, ASP.NET Web Forms, React, and TypeScript: a REST service, SQL Server storage
- Integrated PLC / IoT and track-and-trace data, and applied batch, reject, and audit rules for FMCG and pharma lines.
- Used AI-assisted development with an LLM tool such as Cursor to move faster on that code, then reviewed and shipped it.

Junior Software Developer 08/2022 - 08/2023

Greif SA ↗

- Developed and debugged C# / .NET changes to production-monitoring software.
- Ingested PLC, sensor, or scanner data into the database and a simple UI, and fixed defects when that path broke.
- Used Git-style review and repeatable tests on those screens, and learned the plant rules for a good unit, a stop, and a shift.

Developer - Freelancer 03/2022 - 07/2022

- Built websites and small web apps in HTML, CSS, and JavaScript
- Developed small-business stock-management software so an owner could record items, quantities, and stock movement in a simple SQL data store.
- Delivered that software as a working web application, then fixed the defects that showed up once the business started using it.

Electronics Engineering Intern 06/2021 - 02/2022

Resolution Circle ↗

- Workshops in Software | Electrical | Instrumental | Electronics | Automation | Carpentry | Boilermaker

EDUCATION

Electronics Engineering 02/2018 - 09/2022
Vaal University of Technology - Diploma

Matric 01/2013 - 11/2017
Hoërskool Suiderlig
RCL Executive member - Vice Secretary

CERTIFICATES

Amazon Junior Software Developer Professional ↗
AWS - Amazon Web Services

Foundational C# with Microsoft ↗
CodeCamp

Responsive Web Design ↗
CodeCamp

SKILLS

Front-End

Vite | npm	Advanced	CSS / HTML5	Expert
React	Expert	Typescript	Advanced
Nest.js	Advanced	Javascript	Advanced

Back- End

C#	Advanced	WebSockets	Advanced
ASP.NET Core	Advanced	Node.js	Advanced
Python	Expert	PostgreSQL	Advanced
Express.js	Advanced	Microsoft SQL Server	Expert
RESTful APIs	Advanced		

Cloud / Infrastructure / AI

Advanced Prompt Engineering	Expert	Amazon Web Services - AWS	Advanced
		Microsoft Azure	Advanced
Agentic Workflows	Expert	Arduino | Industrial sensors | Cognex Cameras | RFID	Advanced
Cursor AI code	Expert		
Claude Code	Expert	Siemens PLC	Expert
